

I oppose any expansion of HF phone allocations  
on Amateur Radio frequencies.

The current allocations for CW and digital modes  
should be protected. Digital modes are a growing  
segment of the Amateur Service and the CW population  
is quite sizable and stable.

If the phone operators need to lessen crowding  
within their already huge percentage of our Amateur bands,  
then they should embrace newer spectrum efficient  
methods of transmitting voice.

I hope to see the CW and Digital sub-bands protected  
from expanded voice operations.

Respectfully submitted,  
James Cook  
Amateur Extra N5KY  
FCC General Radiotelephone Operators License  
ARRL Member (in opposition to RM-10413)
